*Past performance is not a reliable indicator of future performance. Performance is calculated before taxes, model management and platform fees and after underlying investment management fees. For full details of fees please refer to the relevant platform offer documents. Performance is notional in nature and an individual investor's actual performance may differ to that of the model portfolio. Investment performance is shown from 1/6/2022 and represents modelled performance only and assumes income received is reinvested.

Market Review

US equities continued to rise in July, with the S&P 500 (+3.11% in USD terms) and the Nasdaq 100 (+3.81%) rallying for the 5th consecutive month. All sectors ended July in the black. The MSCI AC World Daily TR was up +3.66% in USD terms and +2.80% in AUD terms as the Australian Dollar strengthened against the US Dollar, but softened vis-à-vis the other major and developed currencies. Emerging markets outperformed on the back of the resurgence in Chinese equities.

The CSI Overseas China Internet, which tracks the performance of the largest Chinese Big Tech firms, was up double digit, recording its 5th best month ever. Australian equities rallied smartly in July, supported by better than expected inflation data. The S&P/ASX 300 TR added +2.89% following the release of the Australian Bureau of Statistics' report, which saw the headline CPI rise +0.8% QoQ and +6.0% YoY.

Mid-caps and smaller companies strongly outperformed the Top 20, while value stocks outperformed growth stocks. The FED, ECB and Bank of Japan continued their rate tightening over the month with the Bloomberg Barclays Global Aggregate Index hedged back to AUD almost unchanged. The RBA held the cash rate at 4.10%, delivering its second pause since May. The Bloomberg AusBond Composite 0+ Yr rose +0.52% for the month.

In terms of portfolio exposures, we see a window of opportunity in August and September to make use of the spike in fixed income yields to buy longer dated bonds in our portfolios as we still believe the US economy will deteriorate in the last quarter of this year causes rates to fall. We do not see any particular reasons to reduce our exposure to growth assets too far ahead of the above scenario. We expect the rotation into sectors that tend to perform better at times of rising yields, such as energy and financials, to persist. Traditional defensives are starting to see inflows as well, signalling that investors may be concerned about what lies a quarter ahead. Our portfolios remain positioned accordingly.

For a detailed market review and outlook, please refer to the *Monthly Market Commentary* document for more.

Portfolio information

- Investment objective:**
 To delivery outperformance of RBA cash rate +2.0% per annum after fees over a rolling 3-year period.
- Suggested minimum timeframe:**
 3 years
- 30% Growth / 70% Defensive
- Portfolio inception date:**
 1 June 2022

Sustainability Score

There are no results for this selection.

Funds eligible for Sustainability Score must meet below criteria:

- At least 67% of a fund's qualified holdings must be eligible to receive an ESG risk score, which would either be an ESG Risk Rating (for corporate holdings) or Country Risk Rating (for sovereign holdings).
- If corporate holdings comprise 5% or more of the portfolio, we require at least 67% of the corporate portion to have ESG Risk Ratings.
- If sovereign holdings comprise 5% or more of the portfolio, we require at least 67% of the sovereign portion to have Country Risk Ratings.
- Portfolio holdings are available for the specified time period.
- Last portfolio date is less than 276 days (9 months), for ESG scores to be calculated
- Fund's universe or legal type = Closed-end Fund, Private Fund, Open-End Fund, ETF, Insurance Fund, Separate Account, Unit Investment Trust.

Important information

The Morningstar Historical Corporate Sustainability Score is a weighted average of the trailing 12 months of Morningstar Portfolio Corporate Sustainability Scores. Historical portfolio scores are not equal-weighted; rather, more-recent portfolios are weighted more heavily than older portfolios. Combining the trailing 12 months of portfolio scores adds consistency while still reflecting portfolio managers' current decisions by weighting the most recent portfolio scores more heavily.

ESG pillar scores are displayed as a number between 0 and 100 with most scores range between 0 and 25. It is the asset-weighted average of the covered corporate holdings in a portfolio. The scores measure the degree to which a company's economic value may be at risk driven by environmental, social, and governance factors. The risk represents the unmanaged risk exposure after taking into account a company's management of such risks.

The Portfolio Unallocated ESG Risk Score represents the unmanaged ESG risk exposure to companies assigned an ESG Risk Rating, but whose risk is not decomposed into environmental, social and governance components. Calculated as the asset-weighted average of the company ESG Risk scores for the covered holdings in a portfolio that do not have E/S/G risk scores, unallocated ESG risk is displayed as a number between 0 and 100, where lower is better. Together, the four portfolio pillar score data points- Environmental Risk Score, Social Risk Score, Governance Risk Score, and Unallocated ESG Risk Score- will add up to a portfolio's Sustainability Score.
