Market Review

All eyes were once again on Central Banks whose “higher for longer” narrative fuelled a climate of general risk aversion which also contributed to the rally in commodities prices, particularly gas and oil, a real threat to price stability. Equity markets that had so far shown resilience began to show the first signs of fatigue, ahead of the quarterly earnings season that will start around mid-October. September was a poor month for investors with all asset classes apart from cash generating negative returns. International shares were down nearly 4% for the month in AUD terms with Australian shares losing nearly 3%. This was despite a backdrop of inflation still declining and jobs numbers holding up well. In fixed income, 10-year Government bond yields continued to hit fresh cycle highs, including the US (4.61%) and Germany (2.93%). Increased oil prices were also an issue following the extension of production cuts by Saudi Arabia. The Aussie dollar lost further ground against the US dollar, depreciating to 0.645. A soft landing in the U.S. economy may be becoming the market consensus, but is not without risks, and a soft landing in the economy may not be a safe landing for the markets. However, there is also more divergence in global growth and variation in asset valuations, which creates opportunities for active investors. The reset in bond yields suggests that fixed income will once again be a diversifier if weaker growth helps to break the back of the inflation outlook.

Important information

The Morningstar Historical Corporate Sustainability Score is a weighted average of the trailing 12 months of Morningstar Portfolio Corporate Sustainability Scores. Historical portfolio scores are not equal-weighted; rather, more-recent portfolios are weighted more heavily than older portfolios. Combining the trailing 12 months of portfolio scores adds consistency while still reflecting portfolio managers' current decisions by weighting the most recent portfolio scores more heavily. ESG pillar scores are displayed as a number between 0 and 100 with most scores range between 0 and 25. It is the asset-weighted average of the company environmental, social, governance risk scores for the covered corporate holdings in a portfolio. The scores measure the degree to which a company's economic value may be at risk driven by environmental, social, and governance factors. The risk represents the unmanaged risk exposure after taking into account a company's management of such risks.
